Objective

Using Cypress, your assignment is to write functional tests covering the scenarios mentioned. We use this to get an overall read on how you approach a problem, design and code a solution.

Brief

The list below outlines some of the things we like to see in a project.
● Scalable design
● Clean, readable code in a well structured project layout
● Retry failure cases
● Reporting

Include a small README.md where you outline the overall project, choices made and provide instructions on how to run it on a laptop or CI/CD tool

Push your code to a public repository on GitHub and send us the link.

Task

Use Cases to test in "https://the-internet.herokuapp.com"
- User can login only using right username and password (Basic Auth)
- Welcome message rendered on button click (Dynamically Loaded Page Elements)
- Input component can accept only numbers (Inputs)
